## Two New Facilities for Midcontinent Communications

**O**laf Anderson has teamed up with Parallel Technologies to build two new precast facilities for Midcontinent Communications. The first 6,500-square-foot facility, located in Grand Forks, North Dakota, was completed in October of 2017 and serves as a new central communications hub for Midcontinent, as well as a secured data center for business customers.

The second Midcontinent structure is a colocation facility located in Fargo, North Dakota. The project began in the fall of 2017 and is slated for an end of April 2018 completion date. This 16,000-square-foot precast structure is intended to serve the upper Midwest and will host, store, and monitor data services for regional and local business customers.

In both projects, Olaf Anderson is providing general contracting services as well as self-performing all steel work, carpentry and general labor. According to Tim Kittila, PE, Parallel Technologies' Director of Data Center Strategy, "Midco was passionate and made sure that we leveraged quality, competent, local contractors as part of the building philosophy. Olaf Anderson fit the bill."
