## Hector International Airport Has Taken Off!

**H**ector International Airport has come a long way since its first routine six-passenger flight from Minneapolis to Fargo in 1931. The airport is now served by five airlines, has U.S. Customs Services for international flights, and services nearly 800,000 passengers per year. With the Fargo airport growing and the increased popularity of private flights, the necessity for private hangar space is on the rise.

In December 2016, the Olaf Anderson design team started working with a client on iterations for a private hangar on 19th Avenue North. The new hangar was to be located on the same property as Fargo Aircraft Maintenance located at 1705 19th Avenue North.

The client's wishes were to keep Fargo Aircraft Maintenance working in their current facility, but provide another building for private plane storage, office space, and lounge space for plane owners.

Construction of the new building, called Hangar 19, began in October 2017 and was completed in June 2018. Hangar 19 consists of 20,000 square feet of private plane storage and approximately 9,500 square feet of office space. A portion of office space and hangar space is dedicated to clients who store their private aircraft in the facility, while other sections were constructed for separate tenants, such as Sanford AirMed.
